Pure Waste is a Finnish company breaking new ground in recycled textiles.

Our products are made of 100 % recycled fibres, without dyes. They offer consumers the same performance, hand feel and durability as similar products made of virgin material.

Responsible Production

Sustainable and responsible standards are core values in our operations. Most of our current operations are located in India.

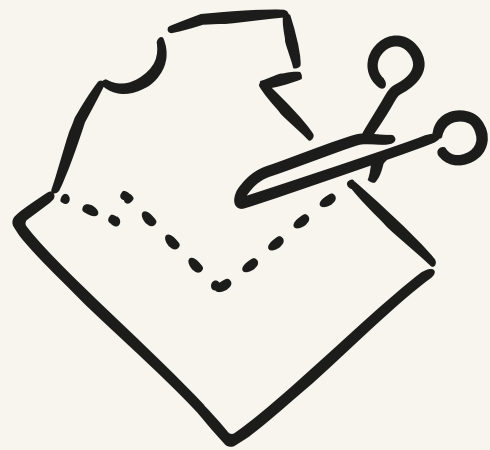

To highlight the importance of these practices, we hold the following certificates:

- GRS (Global Recycling Standard)
- BSCI (Business Social Compliance Initiative)
- SMETA (Sedex Members Ethical Trade Audit)

[Read more about our responsibility](#)

[Sustainability Report](#)

The Process

Pure Waste fabrics are made of 100% recycled fibres: cotton cutting waste and recycled PET polyester from plastic bottles.

The cotton waste is sorted by colour, then processed, blended with recycled PET polyester and spun into new yarns.

This allows us to produce fabrics without re-dyeing since the colour of recycled fibres defines the colour of the fabric.

The outcome is sustainable and durable garments that use 99% less water and generate 50% fewer CO2 emissions than similar products made of virgin materials.

100% Recycled Fabrics

Pure Waste fabrics are both an ethical and high-quality choice. All Pure Waste fabrics are made of 100% recycled materials: surplus cotton cutting waste from the textile industry and recycled polyester. We do not add colours or chemicals to our textiles; the fabric gets its colour according to the recycled waste.

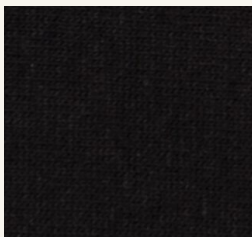

Fabric Qualities

Our products may contain small amounts of fibres of other colours. These fibres are not visible in dark garments, but in light-coloured garments they are easier to see. We think that these small coloured fibres in the fabric are a reminder of our products’ uniqueness and origin.
